CONTRAST MARKERS – GLASS SURFACES.

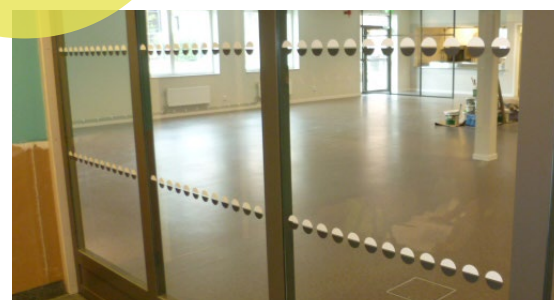

Contrast markers for glass surfaces made from coloured film for a better finish and durability. Two-colour markers are recommended to ensure you get as much contrast as possible in varying light conditions. This is because the background will vary depending on where it is being viewed from, and whether the lights in the building are on or off, for example. Our round, two-coloured standard markers, “half-moons”, always provide good contrast no matter what is behind them. These are stock items, available in 50 mm and 75 mm sizes. We can also manufacture markers to order, and the sky’s the limit with this service. The markers are installed by a specialist. Please contact us if you would like to use your own design or order a different size, or if you need any help with installation.

TECHNICAL SPECIFICATIONS

	Dimensions (+/- 1 mm)	Article no. Black/white	Black	White
Material:	Film. Ordered in running metres. Colours: Two-coloured black/white (half-moons) and single-coloured.
